AMENDMENTS TO THE CLAIMS

The listing of claims below replaces all prior versions, and listings, of claims:

1   1.   (Cancelled)

1   2.   (Currently Amended) The method of claim [[1]] 33, wherein displaying
2   the hyperlink is performed in a browser screen.

1   3.   (Currently Amended) The method of claim [[1]] 33, further comprising
2   associating the hyperlink with a telephone number of a remote party.

1   4.   (Currently Amended) The method of claim [[1]] 33, further comprising:
2   associating the hyperlink with a logical identifier of a remote party; and
3   accessing rules information to determine further information to add to the
4   logical identifier.

1   5.   (Original) The method of claim 4, further comprising determining if the
2   call is local or long distance and adding prefix information if the call is determined to be
3   long distance.

1   6.   (Previously Presented) A method of making a call, comprising:
2   displaying a hyperlink;
3   receiving an indication of user selection of the hyperlink;
4   generating a call request based on the indication;
5   associating the hyperlink with a logical identifier of a remote party;
6   accessing rules information to determine further information to add to the
7   logical identifier; and
8   providing charge information appended to the logical identifier for a toll
9   call based on accessing the rules information.

2

1   7.   (Cancelled)

1   8.   (Previously Presented) A method of making a call, comprising:
2   displaying a hyperlink;
3   receiving an indication of user selection of the hyperlink; and
4   generating a call request based on the indication,
5   wherein displaying the hyperlink comprises displaying a hyperlink
6   associated with a uniform resource locator,
7   wherein the uniform resource locator contains a telephone number.

1   9.   (Previously Presented) The method of claim 8, wherein displaying the
2   hyperlink comprises displaying a hyperlink associated with a uniform resource locator
3   having a protocol identifier and a string representing a logical identifier of a callee.

1   10.   (Original) The method of claim 9, wherein the logical identifier comprises
2   a telephone number.

1   11.   (Original) The method of claim 9, wherein the protocol identifier
2   comprises a predetermined identifier to identify the uniform resource locator as a
3   telephony-related uniform resource locator.

1   12.   (Currently Amended) The method of claim [[1]] 33, further comprising
2   copying the hyperlink from a first storage location accessible by a browser to a second
3   storage location accessible by another application routine.

1   13.   (Currently Amended) The method of claim [[1]] 33, wherein establishing
2   the call session comprises establishing a call session with a remote terminal.

3

1   14.   (Previously Presented) A device capable of participating in call sessions

2   over a data network, comprising:

3   a display;

4   a hyperlink presentable in the display and selectable by a user; and

5   a controller to generate a call request in response to selection of the

6   hyperlink, the call request comprising a Session Initiation Protocol (SIP) message.

1   15.   (Original) The device of claim 14, further comprising a storage device

2   containing call rules, the controller to access the call rules to determine how the call

3   request is to be generated.

1   16.   (Original) The device of claim 15, the controller to determine if the call

2   request is a local call or a toll call based on the call rules.

1   17.   (Original) The device of claim 15, the controller to add one or more

2   special characters to provide a function based on the call rules.

1   18.   (Previously Presented) A device capable of participating in call sessions

2   over a data network, comprising:

3   a display;

4   a hyperlink presentable in the display and selectable by a user;

5   a controller to generate a call request in response to selection of the

6   hyperlink; and

7   a storage device containing call rules, the controller to access the call rules

8   to determine how the call request is to be generated,

9   the controller to add one or more special characters to provide a function

10   based on the call rules,

11   wherein the function is selected from the group consisting of disabling call

12   waiting, inserting a pause, and navigating an automated attendant.

4

1   19.   (Previously Presented) A device capable of participating in call sessions

2   over a data network, comprising:

3   a display;

4   a hyperlink presentable in the display and selectable by a user;

5   a controller to generate a call request in response to selection of the

6   hyperlink; and

7   a storage device containing call rules, the controller to access the call rules

8   to determine how the call request is to be generated,

9   the controller to add charge information to a call request based on the call

10   rules.

1   20.   (Original) The device of claim 14, wherein the hyperlink is presentable in

2   a browser screen in the display.

1   21.   (Original) The device of claim 14, wherein the hyperlink is associated

2   with a label that is presentable in the display and a uniform resource locator that is

3   contained in the call request.

1   22.   (Previously Presented) A device capable of participating in call sessions

2   over a data network, comprising:

3   a display;

4   a hyperlink presentable in the display and selectable by a user; and

5   a controller to generate a call request in response to selection of the

6   hyperlink, the call request for establishing a call session over the data network,

7   wherein the hyperlink is associated with a uniform resource locator

8   containing a logical identifier of a callee, the logical identifier being contained in the call

9   request.

5

1   23.   (Original) The device of claim 22, wherein the uniform resource locator

2   further contains a predetermined protocol identifier to identify the uniform resource

3   locator as a telephony-based uniform resource locator.

1   24.   (Cancelled)

1   25.   (Currently Amended) The article of claim [[24]] 35, wherein the

2   instructions when executed cause the device to receive the uniform resource locator

3   associated with a predetermined telephony protocol identifier.

1   26.   (Currently Amended) The article of claim [[24]] 35, wherein the

2   instructions when executed cause the device to present the hyperlink in a browser screen.

1   27.   (Cancelled)

1   28.   (Currently Amended) The article of claim [[24]] 35, wherein the

2   instructions when executed cause the device to copy the hyperlink from a first storage

3   location accessible by a first application routine to a second storage location accessible

4   by a second application routine.

1   29.   (Previously Presented) A data signal embodied in a carrier wave and

2   containing instructions that when executed cause a terminal to:

3   receive selection of a hyperlink associated with a label that is displayed by

4   the terminal and a uniform resource locator; and

5   generate a call request for establishing a call session over a data network,

6   the call request containing a callee identifier contained in the uniform resource locator.

Appln. No. 09/652,166

1   30.   (Previously Presented) A device capable of participating in call sessions

2   over a packet-based data network, comprising:

3   a display;

4   a storage device to store hyperlinks associated with identifiers of callees;

5   a controller; and

6   a routine executable on the controller to present at least one of the

7   hyperlinks on the display and to generate a call request to establish a call session over the

8   packet-based data network in response to selection of the at least one hyperlink.

1   31.   (Original) The device of claim 30, further comprising an telephone

2   directory routine executable on the controller, the telephone directory routine to add the

3   hyperlink to an address directory.

1   32.   (Original) The device of claim 30, further comprising an electronic mail

2   routine executable on the controller, the electronic mail routine to add the hyperlink to a

3   message.

1   33.   (Currently Amended) ~~The method of claim 1~~ A method of making a call,

2   comprising:

3   displaying, in a display of a terminal, a hyperlink;

4   receiving, by the terminal, an indication of user selection of the hyperlink;

5   generating, by the terminal, a call request for establishing a call session

6   over a packet-based network based on the indication;

7   sending, by the terminal, the call request over the packet-based network;

8   communicating, by the terminal, voice data over the packet-based network

9   in the call session,

10   wherein communicating the voice data over the packet-based network

11   comprises communicating the voice data over an Internet Protocol network.

1   34.   (Cancelled)

7

1   35.   (Previously Presented) ~~The article of claim 24~~ An article comprising one

2 or more storage media containing instructions that when executed cause a device to:

3   present a hyperlink in a display of the device;

4   receive an indication of selection of the hyperlink;

5   receive a uniform resource locator associated with the hyperlink; and

6   generate a call request containing information in the uniform resource

7 locator, the call request to establish a call session over a packet-based network,

8   wherein generating the call request comprises generating a Session

9 Initiation Protocol message.

1   36.   (Previously Presented) The data signal of claim 29, wherein generating the

2 call request comprises generating a Session Initiation Protocol message.

1   37.   (Previously Presented) The device of claim 30, wherein the routine

2 comprises a Session Initiation Protocol stack.

1   38.   (Previously Presented) The device of claim 30, further comprising an

2 Internet Protocol layer to communicate data in the call session.

1   39.   (Currently Amended) The method of claim [[1]] 33, wherein sending the

2 call request comprises sending, by the terminal, a Session Initiation Protocol call request

3 over the packet-based network.

1   40.   (Previously Presented) The method of claim 8, wherein generating the call

2 request comprises generating a Session Initiation Protocol (SIP) call request, the SIP call

3 request containing the telephone number in the uniform resource locator.

1   41.   (Previously Presented) The device of claim 19, wherein generated call

2 request comprises a Session Initiation Protocol call request.

8

Appln. No. 09/652,166
Amdt. dated December 20, 2004
Reply to Office Action Mailed October 20, 2004

1   42.   (Previously Presented) The device of claim 22, wherein the call request

2   comprises a Session Initiation Protocol call request.

9
